

GKB Deep Tine Aerator

Compaction is a problem for groundsman and greenkeepers worldwide. Aeration of compacted sports fields and golf courses is a common practice in all renovations and maintenance programs. The GKB Deep Tine Aerator can penetrate through the compacted turf with various tine sizes on different depths. Surface water can pass through the profile and it allows air into the root structure which leads towards a healthier grass plant and improved surface.

With an adjustable 25-degree heave angle, the Deep Tine Aerator's tine holding system allows you to take control on removing compaction from various depths up to 40 cm.

Featuring a 3-speed heavy duty gearbox, you can adjust the speed of the tines to create the required hole pattern in the turf.

The DTA210 and DTA240 are provided with a hydraulic depth adjustment so that the desired depth can be changed easily.

The machine is provided with a unique tine mounting system, so that it's possible to quickly change to different tine sizes.
